U.S. import statistics are compiled from information verified by Customs Import Specialists on import entries filed with Customs by importers. Under the direction of Vernon D. Acree, Commissioner of Customs, the primary responsibility for the verification of import statistical information is assigned to the field under the technical direction of the Duty Assessment Division.

# SPECIAL ANNOUNCEMENT

## Changes in Schedule A Commodity Classifications Effective July 1976

Effective with the import statistics for July 1976, certain changes have been made in Schedule A, Statistical Classification of Commodities Imported into the United States. Data in report FT135 reflect these changes beginning with the July 1976 issue. Before referring to data in the report, users are advised to check Table A shown below. Table A shows changes in Schedule A classifications and their allocatable TSUSA numbers. There were no changes in units of quantity.

# Explanation of Statistics

## Coverage

The import statistics reflect both government and nongovernment imports of merchandise from foreign countries into the U.S. Customs territory (includes the 50 States, the District of Columbia, and Puerto Rico), without regard to whether or not a commercial transaction is involved. In general, the statistics record the physical movement of merchandise into the United States from foreign countries, with the exception of the following types of transactions which are excluded from the statistics:

1. Merchandise shipped in transit through the United States, when documented with Customs as an intransit movement.
2. Shipments between the United States and Puerto Rico, between the United States and the Virgin Islands, Guam, American Samoa, and other U.S. possessions, between any of these outlying areas, and imports into U.S. possessions from foreign countries. (Imports into Puerto Rico from foreign countries are included in the U.S. import statistics. Statistics on U.S. trade with Puerto Rico and with U.S. possessions are published separately in Report FT 800. Additional data on such trade and on trade of the Virgin Islands with foreign countries are presented in reference tabulations.)
3. U.S. merchandise returned by U.S. Armed Forces for their own use.
4. Gold in the form of ores, concentrates, waste, scrap, and refined bullion. (Information on gold movements, previously shown in Report FT 2402, appears in Report FT 990 effective January 1975. Imports of silver in the above-mentioned forms are included in the statistics.) Issued monetary coins of all component metals are excluded.
5. Some other transactions not considered to be of statistical significance, such as personal and household effects of travelers, temporary imports, low-valued nondutiable imports by mail, etc.

## General Imports/Imports for Consumption

Imported merchandise is reported as "General Imports" and "Imports for Consumption." General imports (shown in this report) are a combination of entries for immediate consumption and entries into Customs bonded warehouses. With certain exceptions as indicated above, these data generally reflect total arrivals of merchandise, whether such merchandise enters consumption channels immediately or is entered into warehouses under Customs' custody to be subsequently withdrawn for consumption or withdrawn for exportation. The general import statistics, therefore, reflect merchandise entered for immediate consumption ("duty free" merchandise, merchandise on which duty is paid on arrival, and merchandise entered into Customs bonded manufacturing warehouses for processing and subsequent export of the main product) plus merchandise entered into Customs bonded storage warehouses and Customs bonded smelting and refining warehouses.

Imports for consumption (not shown in this report) are a combination of entries for immediate consumption and withdrawals from warehouses for consumption. With certain exceptions as indicated above, these data generally reflect the total of commodities entered into U.S. consumption channels. Data on imports for consumption are presented in tabulations which are available for reference purposes. (See the section on Sources of Further Information About Foreign Trade Statistics.)

## Source of Information

The official U.S. import statistics are compiled by the Bureau of the Census from copies of the import entry and warehouse withdrawal forms which importers are required by law to file with Customs officials. The information as to country of origin, net quantity, value, and commodity classification is verified by Customs officials on entries filed for transactions valued over $250, which are ordinarily subject to examination for Customs appraisement purposes. The statistical copy of the entry is corrected if it does not accurately reflect the information called for by the statistical requirements.

## Monthly Carryover

It is the objective of the compiling procedures to include shipments, insofar as practicable, in the statistics for the actual month of importation. However, for purposes of the statistics the month of importation is based on the date of official acceptance by Customs of the import entry or warehouse withdrawal document. This may not in all cases correspond to the actual month of importation. (For example, under the Customs "immediate-delivery" procedures, importers may file the import entry up to 10 workdays after the actual date of importation.) Also, because of processing problems (e.g., late receipt of a document for an end-of-month shipment, rejection of a shipment by the computer because the data fail to meet certain edit criteria established to protect the accuracy of the statistics, etc.), there is an overall average carryover of about 7 percent (in terms of value) of the shipments from the reported month of importation (based on the date of the import entry or warehouse withdrawal document) to a subsequent month, usually the succeeding month. In addition, as a result of the aforementioned Customs "immediate-delivery" procedures, there is a further carryover of presently unknown magnitude from the actual month of importation to a subsequent month. These limitations should be borne in mind when making month-to-month comparisons.

Cumulations of data over at least 4-month periods are desirable to identify underlying trends. Month-to-month changes in imports, exports, and similar series often reflect primarily irregular movements, differences in monthly carryover, etc.

## Import Valuation

Effective with the January 1974 statistics, the foreign trade reports present import value data reported in terms of f.a.s. (free alongside ship) and c.i.f. (cost, insurance, and freight) values, in addition to the Customs value data previously shown. Definitions of these three import valuations are as follows:

### Customs Import Value

The value of imports as appraised by the U.S. Customs Service in accordance with the legal requirements of Sections 402 and 402a of the Tariff Act of 1930, as amended, is referred to as the Customs value. It may be based on the foreign market value, export value, constructed value, American selling price, etc. It generally represents a value in the foreign country, and therefore excludes U.S. import duties, freight, insurance, and other charges incurred in bringing the merchandise to the United States. This valuation is primarily used for collection of import duties and frequently does not reflect the actual transaction value.

**FAS Import Value**

The f.a.s. value represents the transaction value of imports at the foreign port of exportation. It is based on the purchase price, i.e., the actual transaction value and generally includes all charges incurred in placing the merchandise alongside the carrier at the port of exportation in the country of exportation.

**CIF Import Value**

The c.i.f. value represents the value of imports at the first port of entry in the United States. It is based on the purchase price and includes all freight, insurance, and other charges (excluding U.S. import duties) incurred in bringing the merchandise from the country of exportation and generally placing it alongside the carrier at the first port of entry in the United States. If the merchandise was acquired in a transaction between related parties, the purchase price used in deriving the c.i.f. value is based on an arm's-length equivalent transaction price, i.e., a price which would exist between unrelated buyers and sellers.

## Commodity Information

The basic import data are initially compiled in terms of the commodity classifications in the Tariff Schedules of the United States Annotated (TSUSA), which is an official publication of the U.S. Tariff Commission embracing the legal text of the Tariff Schedules of the United States together with statistical annotations.

In this Report, FT 135, the TSUSA data are presented in terms of a rearranged commodity classification system—Schedule A, Statistical Classification of Commodities Imported Into the United States, which is based on the Standard International Trade Classification, Revised (SITC).[1] Schedule A was constructed by the Bureau of the Census (1) to provide for the summarization of data for the approximately 10,000 TSUSA classifications into about 2,400 commodity groupings that are meaningful in terms of commodities important in the U.S. import trade and (2) to provide data in terms of the SITC outline that are comparable, insofar as comparison is possible, to the foreign trade statistics compiled by other trading nations.

At the 1-, 2-, and 3-digit levels, the numbering system of Schedule A is identical with that of the SITC. The commodity coverage is not always identical, but it is believed that for most statistical purposes the coverage at the 1-, 2-, and 3-digit levels can be considered essentially comparable with that of the SITC. Reasonable comparability for statistical purposes can also be expected, in most cases, when 5-digit Schedule A numbers are identical with SITC numbers. At the 4-digit level, the retention of an SITC number in Schedule A indicates similarity of coverage, but the degree of comparability may in some cases be somewhat less at the 4-digit level for identical numbers in the two systems than at the 5-digit level. When a non-SITC number is used as the fourth digit of a Schedule A number, comparability of coverage with any given SITC classification at that level should not be expected, and there will be comparability only with combinations of SITC classifications.

## Country of Origin

The country reported in the statistics as the country of origin is defined as the country where the merchandise was grown, mined, or manufactured. In instances where it is known that the country of origin cannot be determined, the transactions are credited to the country of shipment.

[1] U.N. Statistical Papers, Series M, No. 34, 1961.

Effective January 1976, countries and territories for which import data are compiled are listed in Schedule C-I, Classification of Country and Territory Designations for U.S. Import Statistics. (The Schedule C which was previously in effect has been superseded by Schedule C-I for imports and a separate Schedule C-E for exports.) The data in this report are presented in terms of the first three digits of the four-digit numeric codes in Schedule C-I. Countries are listed in sequence within continents generally from north to south and west to east. Country names that are abbreviated in this report to save space are shown in full in Schedule C-I. Copies of Schedule C-I are available free upon request to the Bureau of the Census. The schedule is also published as Annex B in Tariff Schedules of the United States Annotated.

For individual Schedule A commodity classifications, information for each country of origin is shown only where imports of the commodity from the country average $5,000 or more per month, on a cumulative year-to-date f.a.s. value basis. The designation OTH CTY represents the total for countries from which imports of the particular commodity averaged less than $5,000. The country designation UNIDENT is used to reflect imports from countries which could not be identified because of illegible reporting on import entries for low-valued shipments.

## Estimated Data for Low-Valued Imports

The import statistics include estimated data for shipments valued under $251 reported on both formal and informal entries.(Informal entries generally contain items valued not more than $250). The estimates are based on a 1-percent sample following standard practice. The estimates for shipments valued under $251 are shown under commodity codes 9900000, 990.0, 990, and 99 and are included in the section 9 total and the total for U.S. imports. They are excluded from the other 2-, 3-, 4-, and 7-digit commodity codes. The estimates for low-valued shipments do not reflect any imports by mail of duty-free merchandise valued under $251, for which import entries are not required to be filed.

The statistics for commodity codes from which the low-valued shipments are excluded are undercounted to the extent that such low-valued shipments of the particular commodity are made. The total value so excluded generally amounts to less than 1 percent of the monthly import total. Although subject to considerable variability, particularly when the estimated amounts are relatively small, these estimates for low-valued imports may be of some interest as a rough guide to the general magnitude of the effect that the exclusion of the items has on the commodity data for individual countries.

The extent to which the estimates shown under commodity code 9900000 might not agree with a complete tabulation of the shipments depends upon the number of items that fall in the sample. In table 2, which contains 7-digit commodity-by-country data, the number of items in the sample is shown by country under commodity code 9900000 in the net quantity columns. The number in sample can be used in conjunction with the table, shown on the following page, to obtain an approximate estimate of the sampling variability on a 2-times-out-of-3 basis.

The following will illustrate the use of the table:

Suppose an estimated value of $310,800 is based on 45 items in the sample. Referring to the line 40-49, one notes the values $92,400 and $116,800. This means that the chances are better than 2 out of 3 that a complete tabulation would have resulted in a figure between $218,400 ($310,800 reduced by $92,400) and $427,600 ($310,800 increased by $116,800).

Should a user desire to combine two or more figures that are estimated values or include estimated values, the variability of the combined total can be determined by merely adding the sample size for each estimated value and then referring to the line on the reliability table applicable to the combined sample size.

[1] The actual value of shipments cannot be less than 1/100 of the estimated amount shown in the report. Figures in this column can be ignored if use of them for a particular total would bring the lower limit below 1/100 of the estimate.

[2] If the number of items in the sample is greater than 699, sampling variability for the estimates of the low-valued shipments will generally be less than 9 percent.

## Sources of Error in the Statistics

Monthly import figures are subject to the possibility of errors which may arise from various sources. Among these are errors in the reporting and/or processing of information as to commodity classification, net quantity, value and other statistical factors, month of inclusion (see the explanation regarding Monthly Carryover, above), and errors which may result from the sampling of shipments valued under $251. (See the explanation regarding Estimated Data for Low-Valued Imports.) As indicated above under Source of Information, the information as to net quantity, value, commodity classification, and country of origin is verified by Customs officials on entries filed for transactions valued over $250 which are ordinarily subject to examination for Customs appraisement purposes, thus considerably reducing the possibility of error. In addition, the procedures used to compile the statistics include clerical and computer processing checks designed to protect the accuracy of the statistics to the fullest practicable extent.

### Revisions to Import Statistics

Under the revision policy now in effect, it is planned that revisions to the monthly statistics for the current year will be published in the December issue of this report and these revisions will be reflected in the cumulative data in that issue. Revisions to statistics for the previous year are usually published in the current year's June issue. In instances where unusual circumstances require that an error be corrected prior to the regular time for carrying revisions into the statistics, an announcement regarding the revision is made.

### Sources of Further Information About Foreign Trade Statistics

Summary statistics for both exports and imports are published in Report FT 900, Export and Import Merchandise Trade, and Report FT 990, Highlights of U.S. Export and Import Trade. More detailed data are available in reference tabulations (see below). Information regarding additional sources of foreign trade data is furnished in the Guide to Foreign Trade Statistics. The Guide contains an explanation of the coverage of the statistics and provides sample illustrations of the content and general arrangement of the data presented in individual foreign trade reports and tabulations.

Supplementary information and explanations of interest to users of foreign trade statistics (such as notices of changes in types of shipments covered by current statistics, unusual shipments, problems of valuation and classification, changes in statistical procedures, etc.) are included as special announcements in current issues of the statistical publications. Reports providing additional detail compiled but not published may be obtained on a cost basis.

Copies of foreign trade reports and tabulations are available for public reference use at the reference locations listed below, at various other Department of Commerce field offices, and at some U.S. Customs Service offices. Since the distribution of foreign trade material varies among offices, inquiries regarding the availability of particular types of data should be made at individual offices or directed to the Bureau of the Census, Washington, D.C. 20233.
